About This Document

This user guide describes how to install and operate Multi-Site 4200 video management software on a PC workstation. These instructions are intended for system integrators, installers, and end-user operators.

Overview of Contents

This document contains the following chapters and appendixes:

- **Chapter 1, Getting Started**, describes installation and first-time setup procedures.
- **Chapter 2, Basic Operations**, describes procedures for viewing, recording, and playing back video.
- **Chapter 3, Management**, describes procedures for managing devices, logs, alarms, e-maps, and user accounts.
- **Chapter 4, Configuration**, describes procedures for remotely configuring DVRs and cameras, and for configuring Multi-Site 4200’s system settings.
- **Appendix A, Troubleshooting**, lists possible resolutions to common problems.

Getting Started

This chapter contains the following sections:

- About Multi-Site 4200 on page 9
- Installing Multi-Site 4200 on page 10
- Registering an Administrator Account on page 11
- Running the Setup Wizard on page 11
- Overview of User Interface Layout on page 16

About Multi-Site 4200

Multi-Site 4200 provides centralized management of Honeywell HRGX Performance Series DVRs and connected cameras over a network.

Multi-Site 4200 is scalable and offers a variety of configuration modules for small or large video surveillance installations. The software comes with a comprehensive feature set that includes simultaneous live view and playback of cameras from multiple sites, real-time monitoring and recording, and file backup.
Installing Multi-Site 4200

To run Multi-Site 4200, your workstation must meet the following minimum requirements:

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Windows 8 (32/64-bit)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Windows 7 (32/64-bit)</td>
</tr>
<tr>
<td></td>
<td>Windows Server 2008 (32/64-bit)</td>
</tr>
<tr>
<td></td>
<td>Windows Server 2003 (32-bit)</td>
</tr>
<tr>
<td></td>
<td>Windows XP (32-bit)</td>
</tr>
<tr>
<td>CPU</td>
<td>Pentium 4, 3.0 GHz or faster</td>
</tr>
<tr>
<td>System Memory</td>
<td>1 GB (32 bit)</td>
</tr>
<tr>
<td>Display Resolution</td>
<td>1024 × 768 or higher</td>
</tr>
</tbody>
</table>

Note Multi-Site 4200 is designed for 32-bit versions of Windows but will also run on 64-bit operating systems.

To install Multi-Site 4200

1. Insert the CD that came with your DVR or download and extract the latest Multi-Site 4200 installer package.
2. Double-click **Multi-Site 4200.exe** to launch the InstallShield Wizard.
3. Follow the wizard’s on-screen instructions.

Note You must have administrator privileges to install Multi-Site 4200.

To confirm the installation

Go to the Start menu. If the installation was successful, Multi-Site 4200 will appear in the list of installed programs.
Registering an Administrator Account

The first time you start Multi-Site 4200, you will need to register an administrator ("super user") account.

To register an administrator account

1. On your desktop, double-click the Multi-Site 4200 icon. The Register Administrator dialog box opens.
2. In Super User, type your name.
3. In Password, type your password (minimum 6 characters).
4. In Confirm, re-type your password.
5. If you want to be logged in automatically from now on, select the Enable Auto login check box.
6. Click Register to save your settings.

Running the Setup Wizard

After you have registered an administrator account, a setup wizard opens.

On the welcome page, click Enter Wizard to continue to the Add Device page.

Note  You may be prompted for an administrator password during the setup process.
Adding a Device

To add a device:

1. On the **Add Device** page, click **Show Online Devices** to see a list of DVRs on the same network (LAN) as your PC running Multi-Site 4200.

2. In the **Show Online Devices** dialog box, in the list of discovered devices, click the DVR that you want to add, and then click **Select Device**.

3. Click **Yes** to confirm that you want to add the selected device.

4. If your DVR uses hrgDDNS (a free Dynamic DNS service), in the **Add Device** dialog box, select the **Private Domain Mode** check box. If your DVR does not use hrgDDNS, leave the box unchecked.
5. In **Nickname**, type a descriptive name for your DVR.

6. If **Private Domain Mode** is enabled, in **DNS Address**, type www.hrgdvr-ddns.com. If **Private Domain Mode** is not enabled, the **Address** box should show your DVR’s IP address or its DynDNS address. If the box is blank, type the DVR’s IP address or its DynDNS address.

7. If **Private Domain Mode** is enabled, in **Device ID**, type the serial number of your DVR (you can find this in **Menu > Maintenance > System Info > Device Info** on the DVR).

   If **Private Domain Mode** is not enabled, the **Port** box should show your DVR’s device port number (also known as the server port number). If the box is blank, type the device port number of the DVR. The default port number is **8000**.

8. In **User Name**, type the user name of your DVR. (The default user name is **admin**.)

9. In **Password**, type the password of your DVR. (The default password is **12345**.)

10. Click **Add** to add your DVR to the devices list, and then click **Next** to continue to the next page.

### Adding a Group

**Note** If the **Export to Group** check box was selected when you added your DVR to the devices list, a group was created for your DVR and your DVR’s channels were added to it. If you do not want to make any more changes, click **Cancel** to close the wizard.

On the **Add Group** page, you can add, modify, or delete a group. You can add up to 256 groups.
To add a group

1. On the Add Group page, click Add.
2. In the Add Group dialog box, in Name, type a new name, and then click Yes.
3. Click Next to continue to the next page.

To edit a group name

1. On the Add Group page, click Modify.
2. In the Modify Group dialog box, in Name, type a new name, and then click Yes.
3. Click Next to continue to the next page.

To delete a group

1. On the Add Group page, click Delete.
2. Click Yes to confirm that you want to delete the group.
3. Click Next to continue to the next page.
Importing Cameras

On the Import page, you can import cameras into a group that you have created. You can import up to 64 cameras into each group.

To import cameras to a group

1. On the Import page, under Group, click the camera group that you want to import to.
2. Do one of the following:
   • To import all the cameras to the group, click Import All.
   • To import selected cameras to the group, select the camera(s) you want to import (hold down the Ctrl key to select multiple cameras at the same time), and then click Import.
3. Click Next to continue to the next page, and then click Finished to close the setup wizard.
Overview of User Interface Layout

This section provides a brief overview of the Multi-Site 4200 user interface and the Control Panel tab.

Viewing Live Video

Starting and Stopping Live View

To view all the cameras in a group:
Double-click a group in the devices list. Video from all the cameras in the group appears in the
video windows.

To view selected cameras in a group:
1. Double-click a camera in the devices list. Video from the selected camera appears in the
highlighted video window (by default, the upper left window).
2. To view another camera, click another video window to highlight it, and then double-click
the camera you want to view in that window. Do this for each camera that you want to
view.

Note: Alternatively, you can drag a camera directly from the devices list to the video
window where you want to display the video.

To stop viewing all cameras:
On the Main View toolbar, click the Stop button.

To stop viewing selected cameras:
In the devices list, double-click the camera you want to stop viewing. Alternatively, click the Stop
button on the video window toolbar.

Setting the Screen Layout

You can customize your screen layout.

To set the screen layout:
1. On the Main View toolbar, click the Layout button to display the layout options.
2. Click the desired screen layout option.

To display video full screen:
On the Main Video toolbar, click the Full Screen button to display video in full-screen
mode. Press Esc to exit full-screen mode.
Using Auto-Switch

When auto-switch mode is enabled, the video feed changes at regular intervals, cycling through all the connected cameras.

To start auto-switch:
1. On the Main View toolbar, click the drop-down arrow ( ).
2. Click Single-screen Auto-switch or Multi-screen Auto-switch.
3. Set the Switching Interval by moving the slider left or right.
4. Click the Start Auto-switch button to enable auto-switch.

To stop auto-switch:
Click the Stop Auto-switch button to disable auto-switch.

Using PTZ Control in Live View

If the connected camera supports PTZ control, you can control it remotely.

To start PTZ control:
1. Move the mouse pointer to the bottom edge of the video window to display the toolbar.
2. On the video window toolbar, click the PTZ Control button to open the PTZ control panel.
The following table lists the PTZ control buttons and their functions:

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Zoom" /></td>
<td>Zoom</td>
</tr>
<tr>
<td><img src="image" alt="Focus" /></td>

</tr>
<tr>
<td><img src="image" alt="Iris" /></td>
<td>Iris</td>
</tr>
<tr>
<td><img src="image" alt="3D positioning" /></td>
<td>3D positioning</td>
</tr>
<tr>
<td><img src="image" alt="Direction buttons" /></td>
<td>Direction buttons Click to start/stop the auto-scan function.</td>
</tr>
<tr>
<td><img src="image" alt="Speed adjustment" /></td>
<td>Speed adjustment for pan/tilt functions</td>
</tr>
<tr>
<td><img src="image" alt="Preset" /></td>
<td>Preset configuration</td>
</tr>
<tr>
<td><img src="image" alt="Pattern" /></td>
<td>Pattern configuration</td>
</tr>
<tr>
<td><img src="image" alt="Patrol" /></td>
<td>Patrol configuration</td>
</tr>
<tr>
<td><img src="image" alt="Call or play" /></td>
<td>Call or play a preset/pattern/patrol.</td>
</tr>
<tr>
<td><img src="image" alt="Add/edit" /></td>
<td>Add/edit a preset/pattern/patrol.</td>
</tr>
<tr>
<td><img src="image" alt="Delete" /></td>
<td>Delete a preset/pattern/patrol.</td>
</tr>
</tbody>
</table>

You can control PTZ movement by clicking the direction buttons on the PTZ control panel. Alternatively, you can click on the video window where you want to move the camera.

Click in the screen area to move in the corresponding direction:
- 1: Upper Left
- 2: Up
- 3: Upper Right
- 4: Left
- 5: Right
- 6: Lower Left
- 7: Down
- 8: Lower Right
Configuring Presets

You can set up the camera to go to a predefined position (preset).

**To add a preset:**

1. In the PTZ control panel, click **Preset**.
2. Using the pan, tilt, and zoom controls, move the camera to the position that you want to define as the preset.
3. In the PTZ control panel, in the preset list, click the number of the preset you want to set, and then click the **Add/Edit Preset** button.

   ![Add Preset](image)

4. In **Name**, type a name for the preset, and then click **Yes**. The preset name you entered appears in the preset list next to the number.

**To delete a preset:**

1. In the PTZ control panel, click **Preset**.
2. Click the preset you want to delete in the preset list, and then click the **Delete Preset** button.
3. At the prompt, click **Yes** to confirm the deletion. If the deletion is successful, the message "Deleting preset succeeded" appears in the lower right corner of the screen.
Configuring Patterns

You can set up the camera to follow a predefined pattern of movement.

**To add a pattern:**

1. In the PTZ control panel, click **Pattern**.
2. Click the **Start Recording Pattern** button.
3. Using the PTZ controls, select the camera movements that you want to define as the pattern.
4. When you are finished, click the **Stop Recording Pattern** button.

**To call a pattern:**

1. In the PTZ control panel, click **Pattern**.
2. Click the **Call Pattern** button. The camera follows the pattern that you have programmed.
3. When you are finished, click the **Stop Calling Pattern** button.

Configuring Patrols

You can set up the camera to follow a predefined path between two or more presets.

**To add a patrol:**

1. On the PTZ control panel, click **Patrol**.
2. Select a path from the drop-down list. You can define up to 16 paths.
3. Click the **Add** button to add a preset.
4. In the **Add Patrol No** dialog box, select the preset you want to add, enter the switching interval (1–255 seconds), enter the desired patrol speed (1–40), and then click **Yes**.

5. Add additional presets following the procedure in steps 3 and 4. Click the **Edit Patrol No** button to edit a preset in the patrol path.
To call a patrol:
1. In the PTZ control panel, click Patrol.
2. Click the Call Patrol button . The camera follows the patrol path that you have defined.
3. When you are finished, click the Stop Calling Patrol button .

Recording Video

You can save video clips and screen captures to your local PC.

To save video to your PC:
1. In Main View, on the Main View toolbar, click the Start Recording button .
2. To stop recording, click the Stop Recording button . The saving path of the file appears in the lower right corner of the screen.

To save a captured image to your PC:
1. In Main View, on the Main View toolbar, click the Capture button . A thumbnail of the captured image, along with the saving path of the file, appears in the lower right corner of the screen.

Note You can change the saving path in Control Panel > System Configuration > File. See Configuring File Saving Paths on page 90 for more information.
To view a captured image that you have saved:

1. In the **Main View** tab, in the left pane, click **Picture**.

2. In **Camera**, select a specific camera to search or leave it set to **All Cameras**.

3. In **Start Time** and **End Time**, specify your search parameters. You can type the date and time manually, or you can click the calendar icon to display a graphical interface.

4. Click **Search**. The captured images matching your search parameters are displayed.

5. Double-click the captured image that you want to view. Alternatively, on the **File** menu, click **Open Captured Picture**, click ![Folder Icon] to open the folder where the images are stored, click the date you want to find, and then click the image you want to view.

To rename the image, click the **Save As** button ![Save As Icon].

To delete the image, click the **Delete** button ![Delete Icon].

To email the image, click the **Email** button ![Email Icon].

---

**Note**
To send the image to an email address, you must first configure the email settings. See *Configuring Email Settings* on page 92 for more information.
Playing Back Recorded Video

Instant Playback

You can quickly play back video from the last few minutes or hours in the video window.

**Note** You can set the instant playback pre-time in **Control Panel > System Configuration > General**. See **Configuring General System Settings** on page 89 for more information.

To play back video from the last few minutes:

1. In **Main View**, on the video window toolbar, click the **Playback** button 🔄. Playback of the last few minutes of video starts automatically in the video window.

2. Use the controls on the video window toolbar to control playback.
   - Click 🔄 to speed up playback. Keep clicking to increase playback speed.
   - Click 🔄 to slow down playback. Keep clicking to decrease playback speed.
   - Click 🔄 to advance a frame.
   - Click 🔄 to pause playback.
   - Click 🔄 to stop playback.

3. To return to live view mode, click the **Live View** button 📹 on the video window toolbar.
To play back video from earlier in the day:

1. In **Main View**, on the video window toolbar, click the **Playback** button . Playback of the last few minutes of video starts automatically in the video window.

2. Drag the timeline at the bottom of the screen to the desired playback start time. You can click or to expand or narrow the timeline. The earliest start time is 00:00:00 of the current day.

3. Use the controls on the video window toolbar to control playback.
   - Click to speed up playback. Keep clicking to increase playback speed.
   - Click to slow down playback. Keep clicking to decrease playback speed.
   - Click to advance a frame.
   - Click to pause playback.
   - Click to stop playback.

4. To return to live view mode, click the **Live View** button on the video window toolbar.
Playing Back Locally Archived Video

You can search and play back recorded video files stored on your PC.

Video Player and Toolbar

<table>
<thead>
<tr>

<tr>
<td><img src="image" alt="Capture" /></td>
<td>Capture still image.</td>
</tr>
</tbody>
</table>

To search and play back video files stored on your PC:

1. In **Main View**, in the left pane, click **All File(s)**.
2. In the **Camera** list, select a specific camera to search or leave it set to **All Cameras**.
3. In **Start Time** and **End Time**, specify your search parameters. You can type the date and time manually, or you can click the calendar icon to display a graphical interface.
4. Click **Search**. The video files matching your search parameters are displayed.

5. Double-click the file you want to play back.

6. Use the controls on the video player toolbar to control playback.
   - Click ▶️ to speed up playback. Keep clicking to increase playback speed.
   - Click ▶️ to slow down playback. Keep clicking to decrease playback speed.
   - Click ⏸️ to pause playback.
   - Click ▶️ to advance a frame.

   To rename the video clip, click the **Save As** button 📎.

   To delete the video clip, click the **Delete** button ✗.

   To email the video clip, click the **Email** button 📩. The video clip must be less than 5 MB to use this feature.

**Note**  To send the video clip to an email address, you must first configure the email settings. See *Configuring Email Settings* on page 92 for more information.
Playing Back and Downloading Remotely Archived Video

You can remotely search and play back recorded video files stored on your DVR.

Remote Playback Video Window and Toolbar

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Pause playback.</td>
</tr>
<tr>
<td></td>
<td>Start/stop playback.</td>
</tr>

<td>Download video clip.</td>
</tr>
<tr>
<td></td>
<td>Enable/disable audio (audio muted by default).</td>
</tr>
</tbody>
</table>
To remotely search and play back video files stored on your DVR:

1. In Control Panel, click Remote Playback.

2. In the left pane, select the camera(s) that you want to search.

3. In File Type, select a specific file type to search or leave it set to All to search all file types.

4. Click the date you want to search on the calendar, and then click Search.

5. On the timeline, click the time at which you want to start playing video.

6. Use the controls on the video window toolbar to control playback.

**Note**  You can only play audio on one channel at a time.
To download video files from your DVR to your local PC:

1. In **Control Panel**, click **Remote Playback**.
2. In the left pane, select the camera(s) that you want to search.
3. Under **File Type**, select a specific file type to search or leave it set to **All** to search all file types.
4. Click the date you want to search on the calendar, and then click **Search**.
5. On the video window toolbar, click the **Download** button.

![Image of Download dialog box](image_url)

6. In the **File Download** dialog box, select the file(s) you want to download, and then click **Download**. You can download by file or by date. The “Download by Tag” option is not supported at this time.

**Note** By default, video files are saved in C:/Multi-Site4200/video/. You can change the saving path in **Control Panel > System Configuration > File**. See **Configuring File Saving Paths** on page 90 for more information.
Playing Back Video by Event Type

You can search and play back recorded video files by event type.

To search and play back video files by event type:

1. In Control Panel, click Event Search.

2. Click Motion Detection or Alarm Input, depending on the event type you want to search for.

3. In Group, select the group you want to search.

4. Do one of the following:
   • If you are searching for a motion detection event, in Camera, select the camera you want to search.
   • If you are searching for an alarm input event, in IO, select the alarm input you want to search.

5. In Start Time and End Time, specify your search parameters. The start and end times must be within 24 hours of each other. You can type the date and time manually, or you can click the calendar icon to display a graphical interface.

6. Click Search. A list of search results is displayed.

7. Click in a window to make it active, and then, from the list of search results, double-click the video file you want to play. The file begins playing in the selected window.
Playback Controls

During playback, right-click anywhere in the window to display the context menu. The context menu displays options for capturing, recording, downloading, enabling audio, selecting another camera, and for displaying the video in full-screen mode.

To change the playback speed, click the slider in the lower right of the screen.
Management

This chapter contains the following sections:

- Managing Devices on page 39
- Importing Cameras on page 42
- Managing Logs on page 44
- Managing Alarms on page 48
- Managing E-Maps on page 50
- Managing User Accounts on page 58

Managing Devices

You can add a device, edit device settings, and delete devices in the Device Management tab.

To add a device

1. In Control Panel, click Device Management.
2. Click **Show Online Devices** to see a list of DVRs on the same network (LAN) as the PC that is running Multi-Site 4200.

3. In the **Show Online Devices** dialog box, in the list of discovered devices, click the DVR that you want to add.

4. Optionally, you can:
   - Modify the DVR’s network information (you will need to enter the administrator password of the device to modify these fields).
   - Restore the default password of the device (you will need to enter a recovery code provided by authorized engineers).

5. Click **Select Device**, and then click **Yes** to confirm your choice.

6. If your DVR uses hrgDDNS (a free Dynamic DNS service), in the **Add Device** dialog box, select the **Private Domain Mode** check box. If your DVR does not use hrgDDNS, leave the box unchecked.

7. In **Nickname**, type a descriptive name for your DVR.

8. If **Private Domain Mode** is enabled, in **DNS Address**, type www.hrgdvr-ddns.com.
   
   If **Private Domain Mode** is not enabled, the **Address** box should show your DVR’s IP address or its DynDNS address. If the box is blank, type the DVR’s IP address of its DynDNS address.

9. If **Private Domain Mode** is enabled, in **Device ID**, type the serial number of your DVR (you can find this in **Menu > Maintenance > Information** on the DVR).
If Private Domain Mode is not enabled, the Port box should show your DVR's device port number. If the box is blank, type the device port number of the DVR. The default port number is 8000.

10. In User Name, type the user name of your DVR. (The default user name is admin.)
11. In Password, type the password of your DVR. (The default password is 12345.)
12. Click Add to add your DVR to the devices list.

**To edit a device's settings**

1. In Control Panel, click Device Management.
2. In the Device Management tab, click the name of the device that you want to edit, and then click Modify. Alternatively, double-click the name of the device.
3. In the Connection Settings dialog box, edit the desired settings, and then click Modify.

**To delete a device**

1. In Control Panel, click Device Management.
2. In the Device Management tab, click the name of the device that you want to delete, and then click Delete. The device is removed from the devices list.
Importing Cameras

After you have added a device, you must add a group for your device and import cameras (channels) into that group. You can add up to 256 groups and you can import up to 64 cameras into each group.

Note  If the Export to Group check box was selected when you added your DVR to the devices list, a group was created for your DVR and the cameras connected to the DVR were added to it.

Managing Groups

To add a group

1. In Control Panel, click Import Camera.
2. Under **Group**, click **Add**.

3. In the **Add Group** dialog box, in **Name**, type a new name, and then click **Yes**.

**To edit a group name**

1. In **Control Panel**, click **Import Camera**.
2. Under **Group**, click **Modify**.
3. In the **Modify Group** dialog box, in **Name**, type a new name, and then click **Yes**.

**To delete a group**

1. In **Control Panel**, click **Import Camera**.
2. Under **Group**, click the name of the group that you want to delete, and then click **Delete**.
3. Click **Yes** to confirm that you want to delete the group.

**Importing Cameras**

**To import cameras to a group**

1. In **Control Panel**, click **Import Camera**.
2. Under **Group**, click the group that you want to import to.
3. Do one of the following:
   - To import all the cameras to the group, click **Import All**.
   - To import selected cameras to the group, select the camera(s) you want to import (hold down the Ctrl key to select multiple cameras at the same time), and then click **Import**.
Managing Logs

Multi-Site 4200 keeps a record of alarm and user activity for each camera. There are three types of logs that are kept.

- The alarm log contains a record of triggered alarms (for example, motion detection, video signal loss).
- The operation log contains a record of user inputs (for example, starting or stopping live view, remote playback, PTZ control).
- The system log contains a record of when a user logs in and logs out.

Searching Logs

To search a log

1. In Control Panel, click Local Log Search.

2. In Log Type, select the log type you want to search: Alarm Log, Operation Log, or System Log.

3. To narrow your search, choose one or more of the following limiters:
   - Minor Type
   - User Name
   - Group
   - Camera

4. Specify the date and time you want to search.
a. In **Start Time**, click the calendar icon to open the calendar, specify the desired start date and time, and then click **Yes**.

![Calendar](image)

b. In **End Time**, click the calendar icon to open the calendar, specify the desired end date and time, and then click **Yes**.

5. **Click Search.** All logs matching your search criteria are displayed.

![Log Display](image)
Saving Logs

You can save logs that you locate in a search to your local PC.

To save a log

1. In the Local Log Search tab, click Backup. The Log Backup dialog box opens.

2. Click the browse button. The Select Log File For Backup dialog box opens.

3. Click Log to open the Log folder.

4. In File name, type a name for the log file, and then click Save. The Log Backup dialog box opens, displaying the save path of the log file.

5. Click Backup to save the log.
Opening Saved Logs

You can open log files that have been saved to your local PC.

To open a saved log

2. Click the browse button to browse for the log file on your computer.
3. When you have located the log file, click the file to select it, and then click Open.
Managing Alarms

Viewing Alarm and Event Information

**Alarm** and **Event** buttons are displayed in the lower left corner of the screen.

To show the alarm information panel, click **Alarm**.

To show the event information panel, click **Event**.

To hide the alarm/event information panel, click the **Hide** button . To auto-hide the panel, click the **Auto Hide** button .

To keep the alarm/event information panel open, click the **Lock** button .

To maximize the alarm/event information panel and display it as a new tab (**Alarm Event**), click the **Maximize** button .

At the bottom of the window there are five alarm/event categories listed: **Motion Detection**, **Video Exception**, **Alarm Input**, **Device Exceptional**, and **Other Alarm**. Select the check box next to each alarm/event that you want to display.

To remove an alarm/event from the list, right-click the alarm/event that you want to remove, and then click **Clear**.

Linking Alarm Logs

Each alarm log shows the related alarm information, including the time the alarm occurred, the source, and the type of alarm.
You can click  or  to preview the alarm or send it by email.

- **Live View ( )**: View the live video of the selected alarm source camera.
- **Send Email ( )**: Send the alarm information by email.

---

**Note**
You need to configure email settings in *Control Panel ➤ System Configuration ➤ Email* before using the Send Email function. See *Configuring Email Settings* on page 92 for more information.

---

**Blocking Alarms from a Device**

You can block alarm information from a device if necessary. This can be useful when you are managing a large number of devices from a single Multi-Site 4200 remote client.

**To block an alarm from a device**

1. On the **Tools** menu, click **Device Arming Control**.

2. In the **Device Arming Control** dialog box, in the **Encoding Device** tab, clear the check box next to the device to block the alarm information.

3. Click **Yes** to save your settings.

---

**Note**
This function only blocks the selected alarm information from being received by this Multi-Site 4200 client. The alarm information can still be received by other clients.
Managing E-Maps

You can associate a group with an e-map to visualize the location and distribution of the cameras. This feature is especially useful when an alarm is triggered.

You must add an e-map to start using the e-map function. You can add one e-map for each camera group.

To add an e-map

1. In Control Panel, click E-map.
2. In the E-map tab, in the left pane, select a camera group, and then click Add Map.

3. In the E-map Info dialog box, click the browse button and browse to the directory where the map is stored. The picture format of the map should be .png, .jpg or .bmp.

4. Click the map file, and then click Open.

5. In the E-map Info dialog box, in Map Name, type a name for the map.

6. Click Yes to save your settings. The e-map is displayed in the E-map tab and the name of the map appears in the group list.
Managing Hot Spots

You can add a camera label to the map to show the location of a camera. The label is called a hot spot. After the hot spots are added, the cameras are linked to the map.

In the map preview window, you can see the live view of the camera. If an alarm triggered, an alarm icon 🔄 appears next to the camera label.

To add a hot spot

1. In Control Panel, click E-map.
2. On the toolbar at the bottom of the E-map tab, click the Add Hot Spot button 🔄.
3. In the Add Hot Spot dialog box, select the check box(es) next to the camera(s) you want to add as hot spots, or select the All check box to add all cameras.
4. Next to Hotspot Color, select a color from the drop-down list.
5. Click Yes to save your settings. After being added as a hot spot, the camera icon in the devices list changes to 🔄.
6. Drag the camera hot spot icon to the approximate location of that camera on the map.
To edit a hot spot

1. Do one of the following:
   - Double-click the hot spot icon on the map.
   - Right-click the hot spot, and then click Modify.
   - Select a hot spot on the map, and then click the Modify Hot Spot button on the toolbar.

2. In the Modify Hot Spot dialog box, edit the name and/or color of the hot spot, and then click Yes.

To delete a hot spot

Do one of the following:

- Right-click the hot spot, and then click Delete.
- Select the hot spot icon on the map, and then click the Delete Hot Spot button on the toolbar.

Previewing the Map

After you have finished setting up hot spots, click Map Preview on the toolbar to view the e-map. The map shows the location of the linked cameras as hot spots.
When you double-click a hot spot, a video window opens displaying live video from the camera.

If an alarm is reported, an alarm icon appears on the map to alert you.
To view alarm details, double-click the alarm icon.

To clear the alarm, click the alarm icon on the toolbar.

**Managing Hot Regions**

You can link a map to another map as a hot region. The added map is called a *child map* and the map being added to is called the *parent map*.

---

**Note**

A map can be added as a hot region only once.

---

**To add a hot region**

1. In Control Panel, click **E-map**.
2. On the toolbar at the bottom of the **E-map** tab, click the **Add Hot Region** button.
3. In the **Add Hot Region** dialog box, select the map(s) you want to add as a hot region, or select the **All** check box to add all maps.
4. Next to **Hot Region Color**, select a color from the drop-down list, and then click **Yes**.
5. Drag the map icon to the desired location for the hot region on the e-map.

![](image)

**To edit a hot region**

1. Do one of the following:
   - Double-click the hot region icon on the map.
   - Right-click the hot region, and then click **Modify**.
   - Select a hot spot on the map, and then click the **Modify Hot Region** button on the toolbar.

2. In the **Modify Hot Region** dialog box, edit the name and/or color of the hot spot, and then click **Yes**.

**To delete a hot region**

Do one of the following:

- Right-click the hot region, and then click **Delete**.
- Select the hot region icon on the map, and then click the **Delete Hot Region** button on the toolbar.
Previewing the Map

After you have finished setting up hot regions, click **Map Preview** on the toolbar to view the e-map. The map shows the location of the linked maps as hot regions.

When you double-click a hot region, the child map opens in the **E-map** tab. Click  to go back to the parent map.
Managing User Accounts

You can create multiple user accounts in Multi-Site 4200 and you can specify user privileges for each account you create.

To remotely configure user accounts and permissions for connected devices, see Configuring Device User Settings on page 67.

To create a new user account

1. In Control Panel, click Account Management.

2. Click Add.
3. In the **Add User** dialog box, in **User Type**, select **Administrator** or **Operator** from the drop-down list.

4. In **User Name** and **Password**, type the account user name and password. Re-type the password in the **Confirm** box.

5. Select the user privileges for the account from the list. The **Administrator** user has all user privileges by default.

   **Note** Not all of the user privileges available to Administrator users are available to Operator users. For example, only Administrator users can exit Multi-Site 4200.

6. Click **Save** to save your settings. The new account appears in the accounts list in the **Account Management** tab. All of the user privileges associated with the account take effect immediately.

**To edit a user account**

1. In **Control Panel**, click **Account Management**, click the account you want to edit, and then click **Modify**.

2. In the **Modify User** dialog box, select or clear the check boxes to add or remove user privileges, and then click **Save**. All of the user privileges associated with the account take effect immediately.

**To delete a user account**

In **Control Panel**, click **Account Management**, click the account you want to delete, and then click **Delete**.
Configuration

This chapter contains the following sections:

- Remotely Configuring Devices on page 61
- Remotely Configuring Cameras on page 76
- Configuring System Settings on page 89

Remotely Configuring Devices

You can remotely configure your DVR in the Device Management tab.

To open the Device Management tab

1. In Control Panel, click Device Management.

2. Select the device you want to configure, and click Remote Configuration to enter the Device Parameters window.
Viewing Basic Device Information

On the Information page you can check basic device information for your DVR, including the device type, number of channels, number of hard disk drives, number of alarm inputs and outputs, device serial number, and version information.
Configuring General Device Settings

On the General page you can set the basic parameters of the device.

The following table describes the fields on the General page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Name</td>
<td>Enter a name for the device.</td>
</tr>
<tr>
<td>Device No.</td>
<td>Enter a device number for remote control, if applicable.</td>
</tr>
<tr>
<td>Record Replace</td>
<td>Select Yes to overwrite the DVR hard drive when the hard drive is full.</td>
</tr>
</tbody>
</table>

**Note** Always click Save before exiting the Device Parameters window.
Configuring General Network Settings

On the **Network** page you can configure network parameters of the device.

The following table describes the fields in the **General** tab on the **Network** page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIC Type</td>
<td>Select the NIC type of the device.</td>
</tr>
<tr>
<td>Device IP Address</td>
<td>Displays the IP address of the device.</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Displays the subnet mask IP for the device.</td>
</tr>
<tr>
<td>Gateway</td>
<td>Displays the default gateway IP for the device.</td>
</tr>
<tr>
<td>MAC Address</td>
<td>Displays the MAC address of the device. This is a read-only field.</td>
</tr>
<tr>
<td>MTU(Byte)</td>
<td>Enter the maximum transport unit. The default value is 1500.</td>
</tr>
<tr>
<td>Device Port</td>
<td>Enter the network port of the device. The default port number is 8000.</td>
</tr>
<tr>
<td>Multicast Address</td>
<td><em>Not supported at this time.</em></td>
</tr>
<tr>
<td>HTTP Port</td>
<td>Enter the web service port. The default port number is 8001.</td>
</tr>
<tr>
<td>RTSP Port</td>
<td>Enter the RTSP port. The default port number is 8002.</td>
</tr>
<tr>
<td>Bandwidth Throttle</td>
<td>Select a bandwidth throttle value (from 1 to 30 Mbps).</td>
</tr>
</tbody>
</table>

**Note** Always click **Save** before exiting the **Device Parameters** window.
Configuring Advanced Network Settings

Click the Advanced tab on the Network page to configure advanced network parameters for the device.

The following table describes the fields in the Advanced tab on the Network page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTP</td>
<td>Click Set to enable and configure Network Time Protocol (NTP) time synchronization.</td>
</tr>
<tr>
<td>Email</td>
<td>Click Set to configure email account settings for the device.</td>
</tr>
<tr>
<td>PPPOE</td>
<td>Click Set to enable and configure Point-to-Point Protocol over Ethernet (PPPOE).</td>
</tr>
<tr>
<td>DDNS</td>
<td>Click Set to enable and configure Dynamic DNS (DDNS).</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> After completing the DDNS setup, click Register after clicking Save.</td>
</tr>
<tr>
<td>Advanced</td>
<td>Click Set to configure DNS server addresses and alarm host IPs and ports.</td>
</tr>
<tr>
<td>Settings</td>
<td></td>
</tr>
<tr>
<td>SNMP</td>
<td>Click Set to configure Simple Network Management Protocol (SNMP).</td>
</tr>
</tbody>
</table>

**Note** Always click Save before exiting the Device Parameters window.
Configuring Device Alarm Settings

On the Alarm page you can configure alarm input/output and linkage actions for the device.

The following table describes the fields on the Alarm page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Alarm Input Settings</strong></td>
<td></td>
</tr>
<tr>
<td>Alarm Input</td>
<td>Select an alarm input channel for configuration.</td>
</tr>
<tr>
<td>Alarm Source</td>
<td>IP address of the digital alarm input. <strong>Local</strong> is the hard-wired alarm input configuration on the device. This is a read-only field.</td>
</tr>
<tr>
<td>Alarm Name</td>
<td>Enter a name for the alarm input channel.</td>
</tr>
<tr>
<td>Alarm Status</td>
<td>Set the alarm to <strong>Normal Open</strong> or <strong>Normal Closed</strong>.</td>
</tr>
<tr>
<td>Handling</td>
<td>Select this check box to activate alarm-triggered actions.</td>
</tr>
<tr>
<td>Arming Schedule</td>
<td>Set the time schedule to handle the alarm-triggered actions. The schedule template can be configured in <strong>Camera Settings &gt; Schedule</strong>. See <strong>Configuring the Recording Schedule</strong> on page 79 for more detailed information.</td>
</tr>
<tr>
<td>Linkage</td>
<td>Check the alarm actions which are required to be activated when the alarm input triggered, and select corresponding channel number if required.</td>
</tr>
<tr>
<td><strong>Alarm Output Settings</strong></td>
<td></td>
</tr>
<tr>
<td>Alarm Output</td>
<td>Select an alarm output channel for configuration.</td>
</tr>
</tbody>
</table>
### Configuring Device User Settings

On the User page you can create or delete user accounts and configure permissions for each connected device.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm Source</td>
<td>IP address of the digital alarm output. <strong>Local</strong> is the hard-wired alarm input configuration on the device. This is a read-only field.</td>
</tr>
<tr>
<td>Output Delay</td>
<td>Select the delay duration for the alarm output.</td>
</tr>
<tr>
<td>Arming Schedule</td>
<td>Set the time schedule to handle the alarm-triggered actions. The schedule template can be configured in <strong>Camera Settings &gt; Schedule</strong>. See <strong>Configuring the Recording Schedule</strong> on page 79 for more detailed information.</td>
</tr>
</tbody>
</table>
To create a new user account

1. Click **Add**. The **User** dialog box opens.

2. In the **User Information** area, in **User Type**, select **Guest** or **Operator**.

3. In **User Name** and **Password**, type a user name and password. Re-type the password in the **Confirm** box.

4. Optionally, do one or both of the following:
   - In **IP Address**, type the IP address of the user’s computer.
   - In **MAC Address**, type the MAC address of the user’s computer.

5. In the **User Privilege** area, select the user privilege(s) you want to assign to the new account.

6. Click **Yes**. The new user account appears in the user list.

---

**Note** Always click **Save** before exiting the **Device Parameters** window.
Configuring Device Hard Disk Drive Settings

On the HDD page you can configure network disk and HDD group settings. You can also modify HDD information or format the HDD(s).
Configuring Device Exceptions

On the Exception page you can configure alarm actions and set the alarm output(s).

**Note** Always click Save before exiting the Device Parameters window.
Searching and Viewing Recorded Video Stored on Device

On the File page you can search for and view recorded video files stored on the device.

**Note** Always click Save before exiting the Device Parameters window.
Searching and Displaying Log Files Stored on Device

On the Log page you can search for and view log files stored on the device.

To search for log files
1. In Search Mode, select All, By Type, By Time, or By Type & Time.
2. If searching by type, do the following:
   a. In Major Type, select Alarm, Exception, Operation, or Information.
   b. In Minor Type box, select a subcategory, and then click Search.
3. If searching by time, in Start Time and End Time, specify the date and time you want to search, and then click Search.

To back up log files remotely
If the device supports remote backup, select the files you want to back up, and then click Backup.

Note Always click Save before exiting the Device Parameters window.
Configuring Holiday Settings

On the Holiday page you can configure holiday recording settings for the device.

To configure holiday recording settings

1. Select the holiday you want to configure from the list, and then click the Edit button.
2. In the Edit Holiday dialog box, configure the following settings:
   - **Enable Holiday** Select/clear the check box to enable/disable this setting.
   - **Holiday Name** Enter the name of the holiday.
   - **Mode** Select By Date, By Week, or By Month.
   - **Start Time** Select the start date for the setting. Format varies by mode.
   - **End Time** Select the end date for the setting. Format varies by mode.
3. Click Yes to confirm your settings.

**Note** Always click Save before exiting the Device Parameters window.
Configuring Remote Upgrades

On the Others page you can remotely upgrade the device firmware.

To remotely upgrade the device firmware

1. In the Remote Upgrade area, next to Upgrade File, click to browse to the location of the firmware upgrade file on your local PC.
2. Select the firmware upgrade file, and then click Open.
3. Click Upgrade to start the firmware upgrade on your device. You must reboot your device to complete the upgrade.

---

**Note** Always click Save before exiting the Device Parameters window.
Viewing Network Resource Usage

![Device Parameters Window]

**Note** Always click **Save** before exiting the **Device Parameters** window.
Remotely Configuring Cameras

You can remotely configure camera parameters in the Camera Settings tab.

To configure a camera

1. In Control Panel, click Camera Settings.

2. In Camera, select the camera you want to configure from the drop-down list. Live video from the selected camera appears in the video window.
**Configuring Picture Settings**

Click **Picture Settings** to configure the camera picture. In the **Mode** drop-down list, select the desired mode: **Standard**, **Indoor**, **Dim**, **Outdoor**, or **Customize**. If **Customize** is selected, the following settings appear:

Move the sliders to adjust the brightness, contrast, saturation, and/or hue of the video image.

**Configuring Video Quality**

Click **Video Quality** to configure the video stream quality and resolution of the camera.
To configure the video stream quality and resolution

1. Next to Video Quality, click Low, Middle, or High to set the main stream video quality.
2. Next to Main Stream, select the resolution you want from the drop-down list.
3. To configure additional settings for the main stream, click Advanced Settings.
   a. In Stream Type, select Video or Video & Audio.
   b. In Bitrate Type, select Variable or Constant Bitrate.
   c. In Baud Rate, select the baud rate you want to use. Choose a value between 32 Kbps and 3072 Kbps or click Customize to enter your own value.
   d. In Frame Rate, select the frame rate you want to use. Choose a value between 1/16 and Full Frame.
   e. In Frame Type, select P or BBP.
   f. In I Frame Interval, enter the I-frame interval you want to use. The default value is 25.
   g. Click Yes to confirm your settings.
4. Configure the sub stream and event video settings following the same steps as above.
5. Click Save to save your settings.
6. If you want to copy these settings to additional cameras, do the following:
   a. Click Copy to.
   b. In the Copy to dialog box, select the camera(s) you want to copy the settings to (or select All to copy the settings to all cameras), and then click Yes.
Configuring the Recording Schedule

Click Schedule to set the recording schedule of the camera.

To set the recording schedule

1. Select the Local Recording check box.
2. Next to Record Schedule, click the calendar icon to open the Templates dialog box.

3. Select a pre-designed template (All-day Template, Weekday Template, Alarm Template) or customize your own, and then click Confirm.
To create a customized recording schedule template

1. In the Templates dialog box, do one of the following:
   - Select a numbered template (for example, Template 01), click Edit, and then type a name for the template.
   - Select Customized.
2. Select one of the following recording types:
   - Schedule Recording: Normal scheduled recording (displays as blue).
   - Event Recording: Scheduled recording triggered by events (displays as yellow).
   - Command: Scheduled recording triggered by commands (displays as green).
3. Drag the mouse pointer in the timeline for each day of the week to define the recording start and end times for that day. Clicking on the colored bar displays the exact start and stop times.
4. To copy the recording time to another day of the week, click the colored bar to select it, and then click the Copy To button. Select the check box(es) of the day(s) you want to copy to (or select the All check box to copy to all days), and then click Confirm.
5. Click Confirm.

To delete recording times

- To delete a specific recording time from a customized recording schedule template, in the Templates dialog box, click the recording time you want to delete, click the Delete button, and then click Confirm.
- To delete all the recording times from a customized recording schedule template, in the Templates dialog box, click the Delete All button, and then click Confirm.

To configure advanced settings

1. Click the Advanced Settings button.
2. In the Advanced Settings dialog box, set the pre-record and post-record times, video expired time, enable or disable redundant record, enable or disable audio, and then click Yes.

To save the recording schedule settings

Click Save to save your settings.

To copy the recording schedule settings to additional cameras

1. Click Copy to.
2. In the Copy to dialog box, select the camera(s) you want to copy the settings to (or select All to copy the settings to all cameras), and then click Yes.
Configuring the Video Display

Click Video Display to set up the video display and create privacy masks and text overlays for the camera.

To set up the video display

1. Do one or more of the following:
   - To display the camera name in the video window, select the Display Name check box. Enter the camera name you want to appear on-screen in the Camera Name box. Drag the camera name box to the desired location in the video window. To stop displaying the camera name in the video window, clear the Display Name check box.
   - To display the current date/time in the video window, select the Display Date check box. Specify the date and time format in the Date Format and Time Format boxes. Drag the date/time box to the desired location in the video window. To stop displaying the current date/time in the video window, clear the Display Date check box.
   - To display the current day of the week in the video window, select the Display Week check box. To stop displaying the current day of the week in the video window, clear the Display Week check box.
2. In **OSD Attribute**, select one of the following options:
   - **Transparent And Flash**
   - **Transparent And Not Flash**
   - **Flash And Not Transparent**
   - **Not Transparent and Not Flash**

3. Click **Save** to save your settings.

4. If you want to copy these settings to additional cameras, do the following:
   a. Click **Copy to**.
   b. In the **Copy to** dialog box, select the camera(s) you want to copy the settings to (or select **All** to copy the settings to all cameras), and then click **Yes**.

**To create a privacy mask**

1. Select the **Enable Privacy Mask** check box.
2. Directly below the video window, select **Draw Privacy Mask Area** from the drop-down list.
3. In the video window, drag the mouse pointer over the area you want to mask. The privacy mask appears as an outlined gray shape overlaid onto the screen.

4. Create additional privacy masks if desired. You can create up to four masks.
5. Click **Save** to save your settings.

**To edit a privacy mask**

- Drag the handles on the edges of the mask to adjust its size and shape.
- Drag the center of the mask to move it to a different location, and then click **Save**.

**To delete a privacy mask**

1. Ensure that the **Enable Privacy Mask** check box is selected.
2. Directly below the video window, select **Draw Privacy Mask Area** from the drop-down list.
3. Do one of the following:
   - To delete a single privacy mask, select the privacy mask, and then click the **Delete** button.
   - To delete multiple privacy masks at once, click the **Delete All** button.

4. Click **Save** to save your settings.

**To create an OSD text overlay**

1. In the **Text Overlay** area, select a check box, type the text you want to appear in the video window, and then click **Save**. The text appears in the upper left corner of the video window.

2. Drag the text to the desired location in the video window, and then click **Save**.

**To delete an OSD text overlay**

In the **Text Overlay** area, clear the check box next to the text you want to delete, and then click **Save**.

**Configuring Motion Detection**

Click **Motion Detection** to set up motion detection for the camera.
To create a motion detection area

1. Select the Enable Motion Detection check box.
2. In the video window, drag the mouse pointer over the portion of the window you want to designate as a motion detection area, or click the All Regions button to designate the entire video window as the motion detection area.
3. Move the Sensitivity slider, located directly below the video window, to adjust the motion detection sensitivity.
4. If applicable, drag the motion detection area to the desired location in the video window.
5. Click Save to save your settings.

To delete a motion detection area

1. Do one of the following:
   - To delete a single motion detection area, click the Delete button.
   - To delete all motion detection areas, click the Delete All button.
2. Click Save to save your settings.

To set up a motion detection arming schedule

1. Ensure that the Enable Motion Detection check box is selected.
2. Next to Arming Schedule, click the calendar icon to open the Templates dialog box (it is set to All-day Template by default).
3. Select a pre-designed template (All-day Template, Weekday Template, Alarm Template) or customize your own, and then click Confirm.

   The steps for setting up the motion detection arming schedule are similar to those used to set up the recording schedule. Refer to Configuring the Recording Schedule on page 79 for more information.

To set up motion detection actions

1. In the Linkage Method area, select one or more of the following check boxes.
   - Audible Warning Triggers an audible warning on the device when motion is detected.
   - Notify Surveillance Center Sends alarm information to CMS software when motion is detected.
   - Trigger Alarm Output Activates one or more alarm outputs when motion is detected.
   - Email Linkage Sends an email when motion is detected.
   - Full Screen Monitoring Video window changes to full screen mode when motion is detected.
2. If Trigger Alarm Output was selected in step 1, select the alarm output(s) you want to activate when motion is detected.
3. Under Triggered Camera, select the cameras you want to activate when motion is detected.
4. Click Save to save your settings.
Configuring the Tampering Alarm

Click **Tampering Alarm** to set up a tampering alarm for the camera. A tampering alarm is triggered when the camera is blinded so that the area being monitored is no longer visible.

To create a tampering detection area

1. Select the **Enable Tampering Alarm** check box.
2. The tampering detection area covers the entire video window by default. If you only want to cover a portion of the video window, adjust the dimensions and placement of the grid. Clicking the **All Regions** button will restore the tampering detection area to the entire video window.
3. Move the **Sensitivity** slider, located directly below the video window, to adjust the tampering detection sensitivity.
4. Click **Save** to save your settings.

To delete a tampering detection area

Click the **Delete** button, and then click **Save**.

To set up a tampering detection arming schedule

1. Ensure that the **Enable Tampering Alarm** check box is selected.
2. Next to **Arming Schedule**, click the calendar icon to open the **Templates** dialog box (it is set to **All-day Template** by default).
3. Select a pre-designed template (All-day Template, Weekday Template, Alarm Template) or customize your own, and then click Confirm.

The steps for setting up the tampering detection arming schedule are similar to those used to set up the recording schedule. Refer to Configuring the Recording Schedule on page 79 for more information.

**To set up tampering alarm actions**

1. In the Linkage Method area, select one or more of the following check boxes.

   - **Audible Warning**
     Triggers an audible warning on the device when camera tampering is detected.

   - **Notify Surveillance Center**
     Sends alarm information to CMS software when camera tampering is detected.

   - **Trigger Alarm Output**
     Activates one or more alarm outputs when camera tampering is detected.

   - **Email Linkage**
     Sends an email when camera tampering is detected.

   - **Full Screen Monitoring**
     Video window changes to full screen mode when camera tampering is detected.

2. If Trigger Alarm Output was selected in step 1, select the alarm output(s) you want to activate when camera tampering is detected.

3. Click Save to save your settings.

**Configuring Video Loss Detection**

Click Video Loss to set up video loss detection for the camera.
To set up video loss detection

1. Select the **Enable Video Loss Detection** check box.

2. Next to **Arming Schedule**, click the calendar icon to open the **Templates** dialog box (it is set to **All-day Template** by default).

3. Select a pre-designed template (All-day Template, Weekday Template, Alarm Template) or customize your own, and then click **Confirm**.

   The steps for setting up the video loss detection arming schedule are similar to those used to set up the recording schedule. Refer to **Configuring the Recording Schedule** on page 79 for more information.

4. In the **Linkage Method** area, select one or more of the following check boxes.
   - **Audible Warning** Triggers an audible warning on the device when the video connection is lost.
   - **Notify Surveillance Center** Sends alarm information to CMS software when the video connection is lost.
   - **Trigger Alarm Output** Activates one or more alarm outputs when the video connection is lost.
   - **Email Linkage** Sends an email when the video connection is lost.
   - **Full Screen Monitoring** Video window changes to full screen mode when the video connection is lost.

5. If **Trigger Alarm Output** was selected in step 1, select the alarm output(s) you want to activate when the video connection is lost.

6. Click **Save** to save your settings.

**Configuring PTZ Settings**

If the camera is a PTZ camera, click **PTZ Control** to specify PTZ connection parameters, including baud rate, data bit, stop bits, parity, flow control, protocol type, and address.
Note: The PTZ parameters should be consistent with the settings of the PTZ on the DVR to ensure valid PTZ control.

To configure PTZ settings

1. In Baud Rate, select a value between 50 and 115.2K. The default is 9600.
2. In Data Bit, select a value between 5 and 8. The default value is 8.
3. In Stop Bit, select 1 or 2. The default value is 1.
4. In Parity, select None, Odd, or Even. The default setting is None.
5. In Flow Control, select None, Software, or Hardware. The default setting is None.
6. In Protocol Type, select a protocol from the list. The default protocol is VCL.
7. In PTZ Address, enter the address of the PTZ camera.
8. Click Test to display the PTZ controls. Use the PTZ controls to test PTZ function.
9. Click Save to save your settings.
10. If you want to copy these settings to additional PTZ cameras, do the following:
    a. Click Copy to.
    b. In the Copy to dialog box, select the camera(s) you want to copy the settings to (or select All to copy the settings to all cameras), and then click Yes.

Configuring the Network Connection

Click Network Connection to specify the network protocol type and video stream settings for the camera.
Configuring System Settings

You can configure Multi-Site 4200 system settings in the System Configuration window.

Configuring General System Settings

To configure general system settings

1. In Control Panel, click System Configuration.

2. Configure any of the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log Keeping Time</td>
<td>Sets the length of time logs are kept: One Week, Half a Month, One Month.</td>
</tr>
<tr>
<td>View Scale</td>
<td>Sets the aspect ratio for displaying video in live view mode: Full Screen, 4:3, or 16:9.</td>
</tr>
<tr>
<td>Instant Playback Pre-Time</td>
<td>Sets the amount of video to play back during instant playback: 3 min., 5 min., or 10 min.</td>
</tr>
<tr>
<td>Serial Port</td>
<td>Sets the serial port: NULL, COM1, COM2, COM3, COM4.</td>
</tr>
<tr>
<td>Picture Quality</td>
<td>Sets video picture quality priority: Low, Middle, or High.</td>
</tr>
<tr>
<td>Network Performance</td>
<td>Sets network performance priority: Low, Middle, or High.</td>
</tr>
</tbody>
</table>
3. Click **Save** to save your settings, or click **Default** to return to the factory default settings.

### Configuring File Saving Paths

You can change the assigned file saving paths for storing video files, captured images, and configuration files.

**To change a file saving path**

1. In **Control Panel**, click **System Configuration**.
2. In the left navigation pane, click **File**.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU Performance</td>
<td>Sets CPU performance priority: <strong>Low</strong>, <strong>Middle</strong>, or <strong>High</strong>.</td>
</tr>
<tr>
<td>Enable Screen Toolbar Display</td>
<td>When selected, displays toolbar at the bottom of the screen during live view or playback mode.</td>
</tr>
<tr>
<td>Enable Auto-login</td>
<td>When selected, user is logged in automatically.</td>
</tr>
<tr>
<td>Resume Live View Status</td>
<td>When selected, enables the resume live view status option.</td>
</tr>
<tr>
<td>Auto Time Adjustment</td>
<td>Sets the time to the selected value.</td>
</tr>
</tbody>
</table>

3. Next to the path you want to change, click the browse button ....
4. In the **Select File Path** dialog box, type the name of the directory where you want to save files in **Directory** or browse to the directory using the arrow buttons, and then click **Choose**.
5. Repeat steps 3 and 4 for each path that you want to change.
6. Click **Save** to save your settings, or click **Default** to return to the factory default settings.
Configuring Alarm Sounds

You can change the assigned alarm sounds for motion detection, video exception, and device exception alarms, and for alarm inputs.

To change an alarm sound

1. In Control Panel, click System Configuration.
2. In the left navigation pane, click Alarm Sound.

You can sample the current alarm sounds by clicking the test button next to each audio file (.wav).

3. Next to the alarm sound you want to change, click the browse button.
4. In the Open Video File dialog box, browse to the location of the new audio file (.wav) using the arrow buttons, and then click Open.
5. Repeat steps 3 and 4 for each alarm sound that you want to change.
6. Click Save to save your settings, or click Default to return to the factory default settings.
Configuring Email Settings

You can set email parameters, including the SMTP server, port number, user name and password, sender and recipient addresses, and SSL.

To configure email settings

1. In Control Panel, click System Configuration.
2. In the left navigation pane, click Email.
3. Enter values for the SMTP Server, Port, User Name, Password, Sender's Address, and Receiver's Address.
4. If you want to enable SSL security protocol, click Enable SSL.
5. Click Send Test Email to confirm that the email settings are correct.
6. Click Save to save your settings, or click Default to return to the factory default settings.
## Troubleshooting

The following table provides troubleshooting information for Multi-Site 4200:

<table>
<thead>
<tr>
<th>If this happens...</th>
<th>This might be the problem...</th>
<th>So try this...</th>
</tr>
</thead>
</table>
| The Live View for a device fails. | • Unstable or insufficient network performance.  
  • The device might be offline.  
  • Too many accesses to the remote device might result in too high of a load for the device.  
  • The current user might not have permission for Live View.  
  • The version of the client software might need to be upgraded. | • Check the network status and disable not-in-use processes on your PC.  
  • Check the device’s network status.  
  • Restart the device or disable other remote access to the device.  
  • Log in as the admin user and try again.  
  • Download the newest version of the client software. |

| Normal recording and the remote recording are confused. | • We say **local recording** when we use the client software, it refers to the recording on the PC running the client.  
  • **Remote recording** refers to the recording action commanded by the client on the device side, which stores the record files in the HDD of the device. |  |

| Downloading the playback file either fails or is too slow. | • Unstable or insufficient network performance.  
  • The NIC type is not compatible.  
  • Too many accesses to the remote device might result in too high of a load for the device.  
  • The current user might not have permission for playback.  
  • The version of the client software might need to be upgraded. | • Check the network status and disable not-in-use processes on your PC.  
  • Directly connect the PC running the client to the device to check the compatibility of the NIC card.  
  • Restart the device or disable other remote access to the device.  
  • Log in as the admin user and try again.  
  • Download the newest version of the client software. |
